

FreshWell™ Absorbent Pad Systems

FreshWell™ absorbent packaging systems improve freshness and extends the shelf-life of fresh-cut products for up to 10-14 days. The technology absorbs excess fluid from products and is safely secured in the cells located in the back of the pouch. Absorbent technology is safe for human consumption as it's a blend of food safe materials that comply with FDA and EU food contact regulations.

Benefits

- Removal of excess fluid results in the dramatic improvement in shelf-life, product quality, and product integrity
- Extended shelf-life increases sales and supply chain efficiencies while decreasing product waste
- Fresh-cut vegetables no longer need to be spin dried, resulting in improved yields and reduced product damage
- The technology also significantly reduces dripping and spilling of excess product juices, which is a common customer complaint

Products

- Pads FPMP and FPMG sizes
- Container - Mini 2.5, 4 oz. and 6 oz.
- 10-14 days shelf-life for fresh-cut fruits and vegetables

Highly absorbent food safe pad is built into the container
