

FRESHWELL™ SYSTEMS FOR MICROGREENS

Improve Freshness and Extend Shelf Life of Microgreens with FreshWell™ Absorbent Pads

FreshWell™ absorbent pad systems improve freshness and extend the shelf-life of fresh microgreens of all types. The technology passively reduces the humidity inside your current bag or container to control the development of harmful condensation that otherwise accumulates within the packaging. The absorbent technology is safe for human consumption as it's a blend of food-safe materials that comply with FDA and EU food contact regulations.

BENEFITS

- Reduction in humidity results in the dramatic improvement of shelf-life, product quality, and product integrity, resulting in increased sales and decreased product waste
- Condensation control slows mold growth
- Absorbent technology is passive and does not take away natural moisture from the microgreens, helping to maintain flavor

PAD PRODUCTS

- Multiple cell sizes for all absorbent needs
- Available in rolls, sheets or singles to fit to scale all micro-farming needs
- Configurations to fit most existing tray sizes

Highly absorbent food safe pad is built into the container
