## The Future of Eco-Friendly Cardboard Packaging

APTAR HALOPACK Fiber-Based Tray systems are designed to substantially enhance packaging sustainability for a wide range of fresh, frozen, reheatable, grab-n-go and ovenable food applications. The patented solution is produced with renewable or recycled cardboard and a minimal amount of easily removable film, allowing 90% of the overall package to be recycled in existing cardboard streams. APTAR HALOPACK systems offer a unique-to-market combination of enhanced sustainability and product differentiation through extended shelf life and attractive product presentation, delivering the benefits of plastic without the environmental impact.

### BENEFITS

- Suitable for both dry and high-moisture foods
- Wide range of configurations (skin pack, clamshell, freezable, microwave and ovenable, modified atmosphere packaging (MAP))
- 90% recyclable; uses only 10% removable plastic for easy recycling
- Free of additives, PE-coatings and adhesives
- Manufactured in North America
- Engineered to fit in existing top seal and skin pack equipment with minimal tooling conversion required
- When ready to recycle, trays fold flat, saving recycling bin space for consumers
- Custom printing directly on paperboard (inside and outside package) enables seasonal promotions, provides opportunity for brand differentiation, and eliminates need for additional labels, reducing manufacturing steps associated with label placement.

## BENEFITS

### Sustainable Solution

Produced with renewable or recycled cardboard, easily recyclable in existing cardboard streams

### Reduced Food Waste

Hermetically sealed or breathable options to keep food fresh longer and reduce food waste

### Broad Applications & Configurations

For dry & high moisture foods and other products; tailored for MAP and SKIN applications

### Simple Implementation

Fits existing top seal and skin pack equipment with minimal tooling conversion

### Enhanced Marketing Opportunities

360° printing on paperboard enables brand differentiation while reducing labeling materials & processes

## KEY APPLICATIONS

GRAB N GO CONVENIENCE

ETHNIC FOODS

READY-TO-EAT

MEAT & SEAFOOD
